Work Experience

DevOps & System Engineer Intern · Verisay

Jun 2025 – Sep 2025

- Built and ran DevOps workflows, automating provisioning, configuration and deployment across production environments.
- Managed cloud and bare-metal infrastructure on Hetzner and AWS, including server setup, networking, monitoring and centralized logging.
- Set up CI/CD automation and infrastructure-as-code to speed up releases and cut down on manual deployment work.
- Containerized services with Docker and managed their lifecycle, keeping development and production consistent.

Software Engineer Intern · Entranet Cloud Platform (Verisay)

Jun 2025 – Sep 2025

- Built a data-transfer and logging service for the Entranet platform that tracks data moving between Hetzner and AWS in real time.
- Made the transfers reliable and added a view of the moved data, giving the team clear visibility into status and volume.
- Worked on the platform's backend and deployment pipeline alongside the Verisay DevOps team.

Junior DevOps Engineer · Technosphere Technology

Aug 2023 – Nov 2024

- Built and maintained CI/CD pipelines with Jenkins, Docker and Git, automating the build, test and deployment stages.
- Administered Linux servers and automated routine system-admin tasks with Bash scripts.
- Worked with the development teams to standardize and tidy up deployment across several client projects.
- Helped ship and run production web platforms, including the Faturamı Öde and Qasiyer products.

Software Tester Intern · Mars Athletic

Jun 2023 – Aug 2023

- Ran functional and regression tests on mobile and web apps to check releases before they went out.
- Found, reproduced and logged bugs in Jira, and followed them through to a fix.
- Helped write automated test scripts, which cut down on repetitive manual testing.

Skills

Languages & Frameworks	Python (FastAPI, SQLAlchemy, Celery), Java, C#, .NET, PHP, React Native, SQL (MSSQL, PL/SQL, MySQL), HTML/CSS/JavaScript
DevOps & CI/CD	Docker, Kubernetes, Jenkins, Maven, Git/GitHub, CI/CD pipeline design, Infrastructure as Code, Bash scripting, build & release automation, zero-downtime deployments, systemd
Cloud & Infrastructure	AWS, Hetzner, Nginx (reverse proxy & load balancing), Redis, WebSocket, Linux administration (Ubuntu, CentOS, Devuan, Kali), Windows Server
Operations & Reliability	Monitoring & centralized logging, structured/observable logging, health & readiness checks, database migrations, secrets & configuration management
Ways of Working	Agile/Scrum, microservices & modular-monolith architecture, multi-tenant & role-based access design, automated testing, code review

Projects

Within Air — B2B Carbon Emission Tracking SaaS

Jan 2026 – Present

A B2B SaaS platform that helps UK businesses measure and report their **Scope 1, 2 & 3 carbon emissions** using the official **DEFRA / DESNZ** conversion-factor methodology. I lead the architecture and DevOps side and have been building the platform end to end.
app.withinair.tech ↗

- Built the backend in Python with FastAPI, SQLAlchemy and Celery, backed by MySQL and Redis, using a modular-monolith design that keeps the codebase manageable while leaving room to scale.
- Developed the emission calculation engine around DEFRA factors, with yearly factor versioning and coverage that extends to industrial refrigerant gases for more accurate results.
- Handled authentication, role-based access and per-tenant data isolation so each customer's data stays separate and secure.
- Added device onboarding and live measurement streaming, so emission figures update as new data comes in.
- Built an AI component that gathers and learns from the incoming data and points customers toward the right figures, helping them report accurately.
- Set up CI/CD automation, structured logging and health checks to make production releases safe and repeatable.

Flowelie — Team Collaboration Platform

Self project • Feb 2026 – Present

A collaboration platform that pulls video calls, chat, Scrum boards, analytics, and retro Kudo-voting and task-scoring into one place. It's my own project, and I've built every part of it myself.

- Wrote the Python backend and the real-time layer behind the chat and video rooms.
- Currently building the mobile app in React Native — I'm handling the whole mobile side on my own.
- Built out the Scrum boards, analytics screens and retro voting so a team can run its full agile workflow in the app.

Mythara — Book & Publishing Platform

Self project • Nov 2025 – Feb 2026

A platform bringing aspiring writers, readers and book-cover designers together in one place. I built and shipped a working demo on my own.

- Built the browsing and discovery side so readers could find writers and their work, and writers could publish their books.
- Connected cover designers with writers so they could collaborate on book covers.

YUCode — Programming Practice & Exam Platform

YUCOMP • Sep 2024 – Jan 2026

A practice and exam tool for students to work through programming exercises, run course labs and sit exams. Built with the YUCOMP team.

- Worked on the part of the platform where students write and run their code, both for practice and for graded lab work.
- Helped build the exam and lab-management features that university courses rely on.

DataTransportation — Cloud Data Pipeline

Verisay • Jun 2025 – Sep 2025

A pipeline I built for Verisay that moves data between Hetzner and AWS and shows what's been transferred.

- Wrote the transfer logic and the dashboard that displays the moved data and its status.
- Focused on keeping the data flow reliable and easy to monitor across both cloud providers.

VitalMart — Producer-to-Consumer Marketplace

GDSC Yeditepe • Oct 2024 – Feb 2025

A marketplace for delivering products straight from producers to consumers at lower prices, aimed at helping both low-income shoppers and small producers. Built with the GDSC Yeditepe team.

- Worked on the flow that connects producers directly with buyers, cutting out the middlemen to keep prices down.
- Contributed to the project's goal of supporting low-income consumers and small producers alike.

Qasiyer — QR Ordering for Cafes & Restaurants

Technosphere • Aug 2023 – Nov 2024

A QR-based ordering system for cafes and restaurants, built at Technosphere Technologies.

- Worked on the ordering flow that lets customers scan a QR code, browse the menu and order from their table.
- Looked after deployment and day-to-day operations as part of the DevOps work.

AutoLaVista — Smart Parking Application

PhiloSoftwares • Jan 2024 – Jun 2024

An app that tackles city parking headaches by showing real-time space availability and letting people reserve a spot. Built at PhiloSoftwares, where I worked on DevOps and project management.

- Helped get the real-time availability and reservation features out the door.
- Handled deployment and kept the project moving across the team.

Leadership & Volunteering

YUCOMP

DevOps & Software Lead • Sep 2024 – Jun 2026

Lead the DevOps and software side of club projects, taking them from planning through to deployment.

Luxanta

Founder & Team Lead • Nov 2024 – Jun 2025

Started and led a student software team working across several projects, coordinating the work and the technical side.

PhiloSoftwares

Founder & Team Lead • Oct 2023 – Sep 2024

Led a student software team and took projects from idea through to deployment.

Google Developer Student Club — Yeditepe

DevOps & Software Lead • Sep 2024 – Jun 2026

Help with deployment, cloud infrastructure and getting club projects shipped.

Upwork

Freelance DevOps Engineer • Nov 2024 – May 2025

Took on deployment and infrastructure work for clients.

Education & Languages

BSc Software Development

Yeditepe University • Expected graduation July 2026

Ataşehir, İstanbul, Türkiye

Driving Licence: B

English — C1 (Proficient), B2 spoken

French — A2 (Basic)

Turkish — Native
